The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claim 9 is rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The means for inhibiting is not described in the specification.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 8,9, and 13 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In claims 8 and 9, the limitations of the angles with respect to the mast, an element which is not claimed, render the claims indefinite. Claim 13 is merely functional and does not further limit any claimed element.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Claims 1-10,12,13, and 20 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Skinner. Skinner, in fig4 shows a brake 24, means for attaching 28, the shape of the movable attaching means is a maintaining and inhibiting means as set forth in claims 8 and 9, respectively.

Claims 1-6,8-10,12,13, and 20 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Erickson '934. Erickson '934 shows a brake 24, means for supporting 100, means for attaching 97, means for maintaining and inhibiting 32-36.

Claims 1-3,5,6,8,10,12,13, and 20 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Raymer. Raymer shows a brake 32a, movable attaching means 13, means for supporting 10, as set forth in claims 2 and 14, means for attaching 10, as set forth in claim 5, means for attaching 38, as set forth in claim 15, openable means 36, activation member 12.

Claims 1-6,10-15 and 20 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Greenway. Greenway shows an activating member 26, means for supporting 12.

Claims 1,10-12,14,15, and 20 are rejected under 35 U.S.C. 102(a) as being clearly anticipated by Turner. Turner shows a brake 17, means for attaching 13-15, means for supporting 16, movable attaching means 2.

Claims 1-6,10,12-15, and 20 are rejected under 35 U.S.C. 102(a) as being clearly anticipated by Japanese pat. 257. Japanese '257 shows a brake 4, means for attaching 15, means for supporting 11, activation member 5.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 14 and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over either Skinner or Erickson '934 in view of Turner or Japanese pat. '257. Both Skinner and Erickson '934 show the claimed device with the exception of the pivotally attached activating means. Turner shows a pivotally activating means 11. Japanese shows a pivotally attached activating means 5. It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify either Skinner or Erickson '934 to comprise a pivotally activating means to

lessen the camming action of their movable attaching member on the mast due to the force of the applied to the attaching means.

Applicant's election with traverse of group I in Paper No. 4 is acknowledged. The traversal is on the ground(s) that the process and apparatus are intertwined and the search for both are the same and would not create a burden on the office. This is not found persuasive because applicant did not state how/why they are intertwined, applicant also fails to show that there is a coextensive search, and that a coextensive search is a reason for not requiring a restriction. Applicant fails to provide any reason or rational to support the self-serving conclusion that there is no burden. It is noted that the burden of an examination is more than the search.

The requirement is still deemed proper and is therefore made FINAL.
